

HARMONY

ANTIMICROBIAL PROTECTION

All HARMONY products that are contact surfaces come pretreated with “AEGIS® Microbe Shield”; a safe, effective antimicrobial surface treatment that renders surfaces inhospitable to the growth of bacteria, fungus, mold, mildew, yeast, algae, and odours that can adversely affect the life and performance of a product.

AEGIS® is not a disinfectant - AEGIS® is a long-term surface protection that continues to control and prevent the growth of Microbes 24/7 on hard and soft surfaces for 365 days between cleanings by neutralizing the Microbe’s natural cell protection.

AEGIS® uses molecular technology to form a colourless, odour less, positively charged bed of spikes on material surfaces that attracts, then electrocutes and ruptures a microbe’s negatively charged cell membrane and quickly dies.

Once applied AEGIS® creates a permanent bond to the material surface which can be cleaned repetitively without removing the AEGIS® treatment. AEGIS® is not a disinfectant or replacement for regular disinfecting or regular hygiene practises.
